Welcome

Thank you for using our Smart Professional Surveillance System (SmartPSS)!
This user’s manual is designed to be a reference tool for operation of your system.
Here you can find detailed operation information about SmartPSS.
1. Overview and Environment

1.1 Overview

SmartPSS is an abbreviation for Smart Professional Surveillance System. The software is to manage small quantity security surveillance devices. It releases with the device and does not support the products from other manufacturers. It has the following features:

- Software password reset.
- View real-time video of several camera channels.
- View the playback video files from various cameras.
- Support multiple scheduled arms to realize auto PC guard.
- Support e-map; you can clearly view and manage all device locations.
- Video wall preview.
- People count and heat map.
- Search and export log.

1.2 SmartPSS Interface

SmartPSS software interface includes 5 parts: function tab, system info, function list, shortcut, and help. See Figure 1-1.
<table>
<thead>
<tr>
<th>No.</th>
<th>Name</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Function tab</td>
<td>In default status, it shows Device tab, New tab and +. Click +, you can add new tab. If you open function in New tab, it enters</td>
</tr>
<tr>
<td></td>
<td></td>
<td>corresponding function interface, and meantime tab name is updated to new function name.</td>
</tr>
<tr>
<td>2</td>
<td>Event</td>
<td>● [and ] Click icon to switch event alarm between mute and sound.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>● [ ] (example only), click icon to enter Event interface.</td>
</tr>
<tr>
<td>3</td>
<td>User</td>
<td>● Click [ ], select lock screen.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>● Click [ ], select switch user.</td>
</tr>
<tr>

</tbody>
</table>
Function List

- **Live View**
  Connect to camera, to achieve live preview. It supports local record, snapshot, audio on, talk, instant playback, zoom in video, switch stream, config device parameter, config intelligent channel and etc.

- **Access**
  Connect to access control device, support A&C monitoring, e-map, video link, user management and etc.

- **Intercom**
  Connect to intercom device, support call, live preview, remote unlock, send info and etc.

- **Video Wall**
  Video on wall.

- **Event**
  View, process and mark event.

- **Playback**
  Playback and export device record, device picture, local record and local picture.

- **People Counting**
  View and export people count info within a certain period, support contrast of different channels or people count info.

- **Heat Map**
  Search and export heat map within a certain period.

- **Log**
  Search and export system log and operation log.

- **Devices**
  Search and add device, batch import or export device info, modify and delete device info.

- **Device CFG**
  Configure camera, network, event, storage and system.

- **Event Config**
  Alarm type includes device alarm (such as device offline alarm) and external alarm. You can set alarm notice, alarm link video, alarm output and arm time.

- **Tour&Task**
  Config and manage tour plan.

- **PC-NVR**
  Connect to NVR, manage NCR disk and set record plan.

- **User**
  Add, modify and delete user and role, and manage role and user right.

---

**Chart 1-1**

Chart 1-2
2. Login

For first time login, you shall initialize the device. If the device is initialized, please login via account and password.

2.1 Initialize Device

After SmartPSS installation is complete, you login it for the first time. Please follow system instructions to set admin login password and password security. This password set here is used to login system. Password security requires to answer security questions to reset password.

Steps

Step 1. Double click. See Figure 2-1.

Step 2. Set parameter, see Chart 2-1.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Password</td>
<td>Set password which is 8 ~32 digits without space. At least two types of number, upper case, lower case and symbol.</td>
</tr>
<tr>
<td>Password Strength</td>
<td>Here shows strength of password you enter above. It here shows red, this password is too weak. Green means best security.</td>
</tr>
<tr>
<td>Confirm Password</td>
<td>Match password entered above.</td>
</tr>
<tr>
<td>Auto Login after Registration</td>
<td>If checked, it will auto login when registration is complete.</td>
</tr>
</tbody>
</table>

Figure 2-1

Chart 2-1
Step 3. Click Next, see Figure 2-2.

![Initialization wizard](image)

Figure 2-2

Step 4. Select question and answer it.
Step 5. Click Finish, save config.
   If you check “Auto Login after Registration” in step 2, then system auto logins; if not, it returns to login page.

### 2.2 Login SmartPSS

After device initialization complete, enter username and login password.

Step 1. Double click , see Figure 2-3.
Step 2. Set parameter, see Chart 2-2.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>![User Icon]</td>
<td>Enter username and password.</td>
</tr>
<tr>
<td>![Password Icon]</td>
<td>Select it, system remember password and you do not need to enter password again at next login.</td>
</tr>
<tr>
<td>Remember password</td>
<td>Select it, it auto remember password, and it will auto login at next time.</td>
</tr>
<tr>
<td>Auto Login</td>
<td>When you forget password, you can answer security question to reset password. See Ch 2.3.</td>
</tr>
<tr>
<td>Forget password</td>
<td></td>
</tr>
</tbody>
</table>

Chart 2-2

Step 3. Click Login, see Figure 2-4.

Note:
If it is the first time login, the system will show wizard of user to introduce new function and features.
2.3 Reset Password

When you forget password, please answer security question to reset password.

Step 1. Double click, see Figure 2-5.
Step 2. Click **Forgot password?**, see Figure 2-6.

**Figure 2-6**

Step 3. Answer security question, click Next, see Figure 2-7.
Step 4. Set password, see Chart 2-3.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Password</td>
<td>Set password to be 8～32 digits without space, including at least two types of number, upper case, lower case and symbols.</td>
</tr>
<tr>
<td>Password Strength</td>
<td>Feedback password strength. Red means weak password, and green means secure password.</td>
</tr>
<tr>
<td>Confirm Password</td>
<td>Match password set above.</td>
</tr>
</tbody>
</table>

Step 5. Click OK.
3. Devices

SmartPSS supports to add a single device or batch device (i.e. IPC, NVR) via auto search. You also can config and operate device.

3.1 Add Device

SmartPSS supports to add device via multiple methods, please select method to add device according to device quantity, segment and etc.

**Auto Search**

You must add device as batch and make them in the same segment, or if you do not know device IP, you can uses this method to add device when you only know device segment.

Step 1. In Devices, click Search.

Step 2. Set device segment and click Auto Search. See Figure 3-1.

Note:
- Click Refresh, to refresh searched device.
- Check device IP you want to modify, click Modify IP to change IP. See Ch 3.3.

![Auto Search](image)

Figure 3-1

Step 3. Check device you want to add, click Add.

Step 4. Click OK. Login box pops up.

Step 5. Enter device username and password. Click OK. System shows device list added. See Figure 3-2.

- After device is added, it stays at auto search page, you can continue to add device or click Cancel to exit.
- After device is added, SmartPSS auto logins device. Login is successful, then online status changes to “online”, otherwise it is “offline”.

![Device List](image)
Icon | Note
--- | ---
| Click this icon, enter Modify Device interface, you can modify device info, including device name, IP/domain, port, username and password. You can double click device to enter Modify Device interface. |
| Click this icon, enter Device Config interface, you can set its camera, network, event, storage and system info. |
| Device in login status, icon is . Click this icon to exit device, it changes to . Device is offline, icon is . Click this icon, login device (with correct device info), icon changes to . |
| Click this icon to delete device. |
| When you select to show device code, this icon will be shown. Click this icon to custom device code for future keyboard pairing. |

Chart 3-1

**Manually Add**

When you add a single device, and support device IP and domain name, we recommend you to manually add device.

Step 1. In Devices interface, click Add, see Figure 3-3.
Step 2. Set device parameter, see the following chart.

<table>
<thead>
<tr>
<th>Item</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device name</td>
<td>Please input a device name here.</td>
</tr>
<tr>
<td>Method to add</td>
<td>By IP/domain and SN.</td>
</tr>
<tr>
<td>IP/Domain name</td>
<td>Device IP address or domain name. Note: You can add device of IPV6 address.</td>
</tr>
<tr>
<td>SN</td>
<td>Device SN. Note: For P2P device only.</td>
</tr>
<tr>
<td>Port</td>
<td>Device IP port. It is 37777 by default.</td>
</tr>
<tr>
<td>Group Name</td>
<td>You can choose one group.</td>
</tr>
<tr>
<td>User name</td>
<td>The user name you login the device.</td>
</tr>
<tr>
<td>Password</td>
<td>The password you login the device.</td>
</tr>
</tbody>
</table>

**Chart 3-2**

Step 3. Click Add, complete adding of device.
Note:
- If you continue to add device, then click Save and Continue to add device and save the manually added device.
- If you cancel adding, then click Cancel to exit.
- After device is added, SmartPSS auto logs in the device. When it successfully logs in, the device status becomes “online”, otherwise it is “offline”.

### Batch Import and Add Device
If devices you want to add are not under the same segment, you can prepare device info file (.xml format) and import it into device. If you have management device on [www.dahuap2p.com](http://www.dahuap2p.com), then you can add device under your account by importing.

Note:
If you need a template of device info, you can export it in Device interface.

**Step 1.** In Devices, click Import. See Figure 3-4.

![Device Import](image)

**Figure 3-4**

**Step 2.** According to actual condition, select import method.
- Select Local tab to select device info locally.
- Select From [www.dahuap2p.com](http://www.dahuap2p.com), enter username and password.

**Step 3.** Click Import. When successfully imported device, system shows a message, click OK.

Note:
After device is added, SmartPSS auto logs in the device. When it successfully logs in, the device status becomes “online”, otherwise it is “offline”.

### 3.2 Modify Device Info
Add device info (username, password, IP/domain) which is wrong or shall be updated, you can change info here.

Note:
This chapter introduces how to change device info, please refer to Ch 10.

**Step 1.** In Device interface, click next to device you want to modify, or double click device.

See Figure 3-5.
Step 2. Change device info, refer to Chart 3-2.
Step 3. Click Save.

3.3 Modify IP

Step 1. In Devices interface, click Auto Search.
Step 2. Set device segment and click Search. See Figure 3-6.
Step 3. Check device you want to modify IP, click Modify IP.
Step 4. Enter username and password. Click OK.
   • When you check a single device, system pops up Modify IP box, see Figure 3-7.

![Figure 3-7](image)

   • When select more than one device, system pops up Batch Modify IP box, see Figure 3-8.

![Figure 3-8](image)

Step 5. Set device new IP start IP, subnet mask and gateway.
Step 6. Click Save.

### 3.4 Delete Device

If device added is no longer managed, please delete the device. You can delete one by one or by batch.

#### Single Delete

Step 1. In Device interface, click next to device you want to delete, see Figure 3-9.
**Step 2.** According to actual condition, check select “at the same time delete the delete snapshot and record” or not.

**Step 3.** Click OK.

**Batch Delete**

**Step 1.** In Device interface, select device to delete.

**Step 2.** Click Delete. See Figure 3-9.

**Step 3.** According to actual condition, check select “at the same time delete the delete snapshot and record” or not.

**Step 4.** Click OK.
4. Preview
After you add device on SmartPSS, you can enter Live View interface to preview. You also can set e-map and etc.

4.1 Introduction to Interface
The following introduce each part and function of interface.

Click , in New interface select Live View, see Figure 4-1.

<table>
<thead>
<tr>
<th>No.</th>
<th>Name</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Device list</td>
<td>You can switch streams, create device groups, create new maps, update channel information, modify channel names, log off, and log in to devices.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- When the Default Device Tree is set to Device Tree (by device), the device tree displays the grouping and channels for the device.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- When the Default Device Tree is set to Area Tree (by channel), the device tree displays the zones and channels.</td>
</tr>
<tr>
<td>2</td>
<td>Preview Window</td>
<td>Browse this area, window can be split into various modes. You can snapshot, record during preview. It supports tour, talk, IVS overlay and etc., refer to Ch 4.2.</td>
</tr>
</tbody>
</table>
3 PTZ

- For motorized zoom devices, focus, autofocus, or focus can be reset.
- For PTZ setting, you can simulate the mouse, open or close PTZ menu, adjust PTZ speed, direction, zoom, focus and iris.

Click More Features to set Preset, Tour, Horizontal Rotation, Scan, Track, and Accessibility.
See Ch 4.7.

4 Save View

When there is many device connected, and you often preview more than once window at the same time, you can save preview as view of multiple devices, so when you enable this view in the future, it will auto open device preview saved. Saved views are shown below view tab under device list.

5 Tour

When tour plan exists, you can select tour quickly here.

6 Aspect Ratio and Window Split

<table>
<thead>
<tr>
<th>Aspect Ratio</th>
<th>Window Split</th>
</tr>
</thead>
<tbody>
<tr>
<td>Original</td>
<td>adjust aspect ratio</td>
</tr>
<tr>
<td>4</td>
<td>adjust split</td>
</tr>
</tbody>
</table>

Chart 4-1

4.2 Live View

You can live view video, local record, snapshot, enable audio, talk, instant playback, zoom in video, switch stream, config device parameter, config intelligent channel, config master-slave track, update channel info and etc.

You can preview via:
- Select preview window, double click to preview in device list.
- Drag device you want to preview into window.

See Figure 4-2.
<table>
<thead>
<tr>
<th>No.</th>
<th>Task</th>
<th>Note</th>
<th>Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Open local record</td>
<td>Save record to local</td>

<td>Adjust aspect ratio of video.</td>
<td>Select the video window, right-click to select Window Scale, select the video screen display ratio.</td>
</tr>
<tr>
<td>18</td>
<td>Switch play strategy</td>
<td>Play strategy includes balance, real-time and fluency.</td>
<td>Select enabled video window, right click window and select play strategy.</td>
</tr>
<tr>
<td>19</td>
<td>Switch stream</td>
<td>Support main stream, sub stream1 and sub stream 2.</td>
<td>Select enabled video window, right click stream type.</td>
</tr>
</tbody>
</table>

### 4.3 E-Map

Via E-map you can straightly known the location of video channel or alarm channel and live preview.

**New Map**

Step 1. Right click group in Organization Tree, select New Map. See Figure 4-3.
Step 2. Set map name, select path of picture.
Step 3. Click Save. See Figure 4-4.

Note:

- Click to create new hot zone on map.
- Click to modify map name or replace map.
- Click to adjust opacity.
- At the lower right corner, you can see aerial view of map. Click to close aerial view and click to open aerial view.
Step 4. Drag camera to corresponding monitor position on map to adjust camera monitor range, or drag camera alarm input into map. See Figure 4-5.

Step 5. Add new hot zone.

1. In e-map interface, click ![New Map](image). See Figure 4-6.

2. Set map name, select picture path. Click Save.
3. Double click hot zone, map switch to hot zone map, see Figure 4-7.
Note:
On map, click picture window at the lower-left corner, you can return to map or previous level of hot zone.

4. Drag device in list to map, and adjust camera monitoring range.

Step 6. Click to save map. After config is complete, it shows created map and hot zone in it, see Figure 4-8.

**Preview Map or Hot Zone**
It supports to add camera on map or hot zone, and here uses hot zone as an example.

Step 1. Open Live interface, in device list double click heat map or drag heat map into preview window.

Step 2. On map click camera or place mouse on camera for a few seconds, in the pop-up window you can view live preview.

Note:
- In hot zone preview window, click to return to map preview.
If current preview is map, double click hot zone mark on it to enter hot zone.

Click hot zone preview window, right click and select Open All Channels, at bottom of preview window it shows live of all devices.

Right click Video Wall, and in pop-up window it shows live of all devices.

4.4 Config IVS Channel

IVS includes general behavior analytics, face recognition, people count, heat map and etc., different devices support different IVS plans, which subject to actual interface.

In Live View interface, right click device in list, select IVS channel cfg, see Figure 4-9.

Note:

- IVS analytics only detects IVS analytics capacity of connected device.
- Speed dome or PTZ device support scene config and preset selection, IPC do not support scene config.
- Set IVS analytics refer to continuous setup in this chapter.

![Figure 4-9](image)

**Scene Config**

For example to device to add is speed dome or PTZ device, then it supports to set preset in scene config interface, and you can set different plans for preset.
Add Preset
Step 1. In Scene interface, click Add Scene, see Figure 4-10.

Step 2. Via PTZ direction control, rotate camera to designated position.
Note: Step length can control PTZ speed, within 1~8 step length.
Step 3. Click Save.

Modify Preset
Step 1. In Scene interface, select preset to modify, see Figure 4-10.
Step 2. Via PTZ direction control, rotate camera to designated position.
Note: Step length can control PTZ speed, within 1~8 step length.
Step 3. Click Save.

Delete Preset
Step 1. In Scene interface, select preset to delete, see Figure 4-10.
Step 2. Click Delete.

General Behavior Analytics
After you enable behavior analytics, you can tripwire, perimeter protection and etc. Subject to actual front-end device.

4.4.2.1 Enable Behavior Analytics

Step 1. In Scene interface, when preset setup is complete, click Next. See Figure 4-11.

Step 2. Select scene.

Step 3. Click Q and select IVS plan.

4.4.2.2 Calibration

According to user marked 1 horizontal line and 3 vertical lines, and corresponding actual distance, it can estimate internal parameter and external parameter in order to confirm relationship between gotten 2D image and 3D actual object.

Step 1. In Smart Plan interface select plan and click Next or config, see Figure 4-12.
Step 2. Click Region, and draw region in window, when you complete, right click to end.

Step 3. Set ruler length, click $\text{\textbullet}\text{\textbullet}\text{\textbullet}$, Draw vertical rule and left click to end drawing.

Repeat this step to draw 3 vertical rulers. Shape of triangle is recommended.

Step 4. Set horizontal rule angle, click $\text{\textbullet}\text{\textbullet}\text{\textbullet}$, and draw 1 horizontal line in region, left click to end.

Note:
- Select vertical or horizontal rule, click redraw to draw rule. Select region, click redraw is you want to draw again region, vertical ruler and horizontal ruler.
- Select vertical or horizontal ruler, click Delete to delete ruler. Select region, click Delete to delete region, vertical ruler and horizontal ruler together.

Step 5. Click Apply to save.

Step 6. (Optional) vertically or horizontally measure distance.
- Click V-measure, and draw vertical line in region, system shows all drawn vertical line length.
- Click H-measure, and draw horizontal line in region, system shows all drawn horizontal line length.

4.4.2.3 IVS Rule
Here you can set IVS rule.
In Smart Plan interface, select Next or config, see Figure 4-13.

4.4.2.4 Face Detection Rule
Step 1. Check Enable.
Step 2. Modify rule name.
Step 3. Set arming schedule and alarm.
1. Click Config, see Figure 4-14.
2. Click Arming Schedule, according to actual need select week and period, enter start time and end time.
   Note:
   Default armed period is 24-hour per day.
3. Click Alarm tab, set link, see Figure 4-15.
<table>

</tbody>
</table>
● Width or height, as any of the two factors is matched, target will be kept.
● Width and height, as both of the two factors are matched, target will be kept.

3. Click Draw, and draw filter box in video window. Select filter box, drag four angles to zoom in or out.
   Note: Select filter box, click Clear to delete box.

Step 5. Click Save.

4.5 Smart Track Config (Fisheye+Dome)

Smart track (fisheye+dome) sets fisheye camera as master camera with panorama view, and sets speed dome as slave camera.

Calibration Requirement
To improve calibration success rage and accuracy, please follow:
● Calibrate at least 4 groups, max 8 groups. 4 groups is recommend.
● Start from far to close by clockwise or counterclockwise direction. Point of calibration shall be even.
● Calibrate position with obvious traits, such as cross of object corner. See Figure 4-17 and Figure 4-18 Bad Calibration.

Figure 4-17 Good Calibration
Calibrate Camera

Step 1. On device tree select fisheye device, right click select Smart Track Config, see Figure 4-19.

Step 2. Link speed dome. See Figure 4-20.
1. In Link Speed Dome area, click next to fisheye name.
2. In speed dome dropdown list, select speed dome.
3. Click Save. See Figure 4-21.

Step 3. Add calibration point.
1. Click Add, you will see a cross sign and a new record generated.
2. Drag fisheye cross sign to appropriate position.
   Note:
   - To improve calibration accuracy, please use far object as reference for first group.
   - Other calibrations points can be clockwise or counterclockwise distributed.
   - Calibrate position with obvious traits, such as cross of object corner.
3. In speed dome image, adjust speed dome position to make center of speed dome match the cross sign of fisheye. See Chart 4-4.
<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Chart 4-4

4. Click to save calibration info.
5. Repeat step 1~4 to complete remaining calibration position. N
6. Click OK.

**Achieve Smart Track (Fisheye and Dome)**

After you complete calibration, you can view link effect in smart track interface.

Step 1. On device tree, select fisheye device, right click Smart Track. See Figure 4-22.

- By default link mode is enabled, click and you can switch between fisheye correction mode and link mode.
  - To enable fisheye correction, you can select installation method and view mode in fisheye preview window. Refer to Ch 4.8.
- On the left you can set PTZ, refer to Ch 4.7.

![Figure 4-22](image)

Step 2. Execute the following operation to see link effect.

- Link
Click any position in fisheye channel, speed dome will rotate to corresponding position and auto adjust zoom, see Figure 4-23.

![Figure 4-23]

- Pane link
  Select panel in fisheye video, speed dome rotates to corresponding area, see Figure 4-24.

![Figure 4-24]

- Drag link
  Drag position calibration in fisheye video, speed dome rotates with the calibration, see Figure 4-25.
4.6 Smart Track Config (Dome+Fixed)

After you have configured dome and fixed camera linkage, when intelligent rule of fixed camera triggers alarm, speed dome auto links to corresponding position and tracks object until the object exceeds monitor range or tracking time limit.

**Calibration Requirement**

To improve calibration success rage and accuracy, please follow:

- Calibrate at least 4 groups, max 8 groups. 4 groups is recommend.
- Start from far to close by clockwise or counterclockwise direction. Point of calibration shall be even.
- Calibrate position with obvious traits, such as cross of object corner.

See Figure 4-26.
Calibrate Camera

Step 1. Select fixed camera on device tree, right click Start Track Config, see Figure 4-27.

Figure 4-27

Step 2. Link speed dome, see Figure 4-28.

Figure 4-28

1. In link speed dome area, click 📷
2. Click ⬇️ and in dropdown list select speed dome.
3. Set tracking, see

<table>
<thead>
<tr>

<td>Quick Position</td>
<td>Click this icon, select any position to monitor, then you can adjust image with this position as center.</td>
</tr>
</tbody>
</table>

Chart 4-6

4. Click ✅ to save calibration info.
5. Repeat step 1~4, complete remaining calibration config.
Note:
Each speed dome calibrate at least 4 groups, max 8 groups. 4 groups is recommend.
6. Select preset return point.
   When fixed camera video has no tracking to reach set length, speed dome can return to set preset.
7. Click OK, to save.
   Successfully calibrated fixed camera, and system feedbacks. If failed, it will inform calibration failed and please try again.

- **Achieve Smart Track (Fixed and Dome)**
After you complete calibration, you can view link effect in smart track interface.
Step 1. On device tree, select IPC device, right click Smart Track. See Figure 4-22.
On the left you can set PTZ, refer to Ch 4.7.
Step 2. Execute the following operation to see link effect.

- Manually position
  
  Click any position in fixed camera video, link to speed dome. Speed dome will rotate to
  the corresponding position, see Figure 4-32.

- 3D Position
  
  In fixed dome video pane select, speed dome will rotate to corresponding area and
  meantime zoom in/out.
  
  Draw box from upper left to lower right, and zoom in when speed dome is fixed, see Figure
  4-33.
  
  Draw box from lower right left to upper left, and zoom in when speed dome is fixed, see
  Figure 4-34.
Manually track
Refer to Ch 4.4.2.
If you add device as speed dome or PTZ device and support scene config and preset config.

**Add Preset**
Step 1. In Scene interface, click Add Scene, see Figure 4-35.
Step 2. Via PTZ direction control, rotate camera to designated position.
Note:
Step length can control PTZ speed, within 1~8 step length.
Step 3. Click Save.

Modify Preset
Step 1. In Scene interface, select preset to modify, see Figure 4-35.
Step 2. Via PTZ direction control, rotate camera to designated position.
Note:
Step length can control PTZ speed, within 1~8 step length.
Step 3. Click Save.

Delete Preset
Step 1. In Scene interface, select preset to delete, see Figure 4-35.
Step 2. Click Delete.
Note:
To ensure accuracy of manually tracking, please click at the upper right corner to disable tracking. Icon become
In fixed dome video monitoring, click moving target box (inside box is OK), target box changes color, and speed dome select target.

Figure 4-36

4.7 PTZ

Different device PTZ have different setup interface, subject to actual condition. See the following figures and charts.

### Preset
By setting the preset point, you can quickly go to the preset position corresponding to the camera.

Step 1. Via PTZ direction control the camera to designated position.

Step 2. In Preset select preset, click.

Step 3. In select preset no., enter preset name.

Step 4. Click to save preset.

Step 5. Click to delete non-necessary preset.

Step 6. Select preset and click, camera rotates to corresponding position.

### Tour
By setting the tour, the camera can tour between the different preset points.

**Warning:**
Set at least two presets before you can tour.

Step 1. In **Preset**, select tour, and click **Tour**. See Figure 4-39.

![Tour List](#)

**Figure 4-39**

Step 2. Set tour no. and tour name.

Step 3. Select preset.
   a) In Preset list select preset, and enter time.
   b) Click **+** to add preset.
   Repeat this step to add more presets.

Step 4. Click OK.

Step 5. You need to select tour no., click **Tour** so camera will tour among different presets.

**Scan**  
By setting the two borders, the camera rotates repeatedly between the two borders.

Step 1. In **Preset** select Scan.

Step 2. By control PTZ direction, rotate PTZ to designated left position, click **<** to set left border.

Step 3. By control PTZ direction, rotate PTZ to designated right position, click **>** to set right border.
**Step 4.** Click to repeat rotation among two borders.

### Pattern

Record down camera rotation process, via pattern rotation function.

**Step 1.** In select Pattern.

**Step 2.** Click to start to set pattern, and zoom, focus or rotate camera.

**Step 3.** Click to complete.

**Step 4.** Select pattern no., click camera rotate pattern according to record.

### Enable Windshield Wiper

When speed dome has windshield wiper, SmartPSS can control windshield wiper.

**Step 1.** In select wiper.

**Step 2.** Click to wipe speed dome once.

### 4.8 Fisheye View Mode

Only fisheye device supports installation and view mode, different installation modes corresponding to view mode referring to the following chart.

<table>
<thead>
<tr>

</table>

50
5. Tour & Task

5.1 Config Task Plan

By setting tour plan, you can tour each window.

Step 1. Click \( + \), and click Tour & Task.

Step 2. Add tour plan.

1. Click Add. See Figure 5-1.

   ![Figure 5-1](image)

2. Modify task plan name. When you add new task, you can edit task name immediately. Or you can double click tour plan name or click \( \) to modify tour plan name.

Step 3. Set task. It supports to set multiple task. Here takes one task as example.

1. Click \( + \). See Figure 5-2.
2. Set task name and time span, according to actual condition click \[\text{set tour window number}\] to set tour window number.

3. Double-click the channel of the device or drag the channel of the device into the video window in the order that you want. See Figure 5-3.

Note:

- In the Organization Tree, right-click a storage device, select the Bind all channels, the storage channel in turn is bound to the corresponding video window; select the video window to be bound in the Organization Tree, right-click a storage device, select the tie given zero channels zero bound channel to the selected video window.
- Select the video window to be bound, under the Organization Tree, right-click the channel storage devices, select the Bind channel, the channel will be bound to the selected video window.
- Select Bind video window, right-click the organizational tree in the front-end device, select the Bind IPC, the front-end device bind to the selected video window.
- After the video channel bonding, right-click the video window, remove binds or remove all binds.
4. Set channel preset, time span, stream type and channel sequence.
   Note:
   - Click \( \square \) of the corresponding channel, in the left preview screen to display live preview or e-map information.
   - Click \( \uparrow \) or \( \downarrow \) of the corresponding channel, adjust the channel sequence in the task.
   - Click \( \bigcirc \) of the corresponding channel, delete the corresponding channel.

5. Click Save, See Figure 5-4.
Step 4. Set tour task.

When you set multiple tasks, it support task plan by day or week.

1. Click to run the plan. See Figure 5-5.
2. Select device type.
   - Day plan, period is day. There are many different periods in a day.
   - Week plan. There are 7 periods in a week.
3. Select tour plan, set time, click Add.
4. Set different period task, click Save.

5.2 Enable Task

If your device sets schedule, then within set time system will auto plays video according to task.
If you want to manually tour, priority of manual task must be over scheduled task.
Step 1. In New function tab, click Live View.
Step 2. In the interface, select tour plan.
Step 3. Click to enable task plan.
6. Playback

6.1 Playback

You can playback and export device record, device picture, local record and local picture.

In New tab, click + select Playback, see Figure 6-1.

<table>

</tbody>
</table>

| Video file list                  | Click the icon to expand the list of the corresponding channel video file, you can select video files for playback and export the corresponding video file. |
**Condition**
There is device record inside channel.

**Steps:**
Step 1. In playback interface, click Device tab.
Step 2. In Organization Tree, select device channel or select view in View.
Step 3. Select record and set record search criteria.
   a) Select record type and stream, and set time.
   b) Click Search.
Step 4. Select window with record, click [Play]

See Figure 6-2.

![Figure 6-2](image)

### 6.3 Export Device Record

**Condition**
There is device record inside channel.

**Steps:**
Step 1. In playback interface, click Device tab.
Step 2. In Organization Tree, select device channel or select view in View.
Step 3. Set record search criteria.
   a) Select record type and stream, and set time.
   b) Click Search.
Step 4. Select window with record, click 🎬.

Step 5. Click 📋, system select one record, and adjust record part according to actual need, click 📋 again to export record. See Figure 6-3.

![Figure 6-3](image)

Step 6. Select export path and format.

Note: When the Export Format is set to Original Format, please also check the Export Smart Player, export original format player.

Step 7. Click OK.

The system displays the playback stop information, click OK.

The system displays the Export Progress dialog box, as Figure 6-4 below.

After recording the download is complete, the system prompts the download is complete. Click Exporting tab, you can view the video download progress, pause the video being exported to continue downloading paused video, download it again failed to download videos and delete are exporting video; click exported tab, you can view download history and open video storage path.
6.4 Playback Device Picture

**Condition**
There is device picture inside channel.

**Steps**
Step 1. In Playback interface, select Device tab.
Step 2. In Organization Tree, select device channel or in View select view.
Step 3. Select picture and set time. See Figure 6-5.

Click on the right, you can open and close device picture list.

In device picture list, click , device picture list will be shown in format of list; click , device picture list is shown in format of thumbnail.
Step 4. Playback picture.
   - Manual playback: Click Next or Preview.
   - Auto playback: Slide to auto play, and set interval, system will auto playback local picture.

6.5 Export Device Picture

Step 1. In Playback interface, select Device tab.
Step 2. In Organization Tree select device channel or in View select view.
Step 3. Select Picture and set time.
Step 4. Click on the right, to export device picture.
Step 5. Click See Figure 6-6.
Step 6. Select export path, click OK. See Figure 6-7. Click Exported tab, you can view download record, open picture storage path and delete downloaded file.

6.6 Playback Local Record

Condition
There is local record in the channel, see Ch 4.1.

Steps
Step 1. In Playback interface, select Local tab.
Step 2. Click Record tab.
System shows local record list.

In local record list, click , display in list mode. Click , display in thumbnail mode.

Step 3. Select record to playback, click or double click record.
See Figure 6-8.
Note:
You can click to open local record file for playback.

![Figure 6-8]

6.7 Export Local Record

You can export local record.

Condition
There is local record in this channel, see Ch 4.2.

Steps
Step 1. In Playback interface, click Local tab.
Step 2. Click Record tab.
Step 3. Check record to export, click . See Figure 6-9.
Step 4. Select export path and format.

Note: When Export Format is set to Original Format, please check Export Smart Player to export.

Step 5. Click OK.
The system displays the Export Progress dialog box, as Figure 6-10 shown.

After record download is complete, the system prompts the download is complete.
Click Exporting tab, you can view the video download progress, pause the exported video, resume download paused, and delete videos are exporting video; click Exported tab, you can view the download history, open video storage path and delete the downloaded file.

6.8 Playback Local Picture
Condition
There is local picture in the channel, see Ch 4.1.

Steps
Step 1. In Playback interface, select Local tab.
Step 2. Click Picture tab.
   System shows local record list.
   In local picture list, click , display in list mode. Click , display in thumbnail mode.
Step 3. Select picture to playback, click or double click picture
   See Figure 6-11.

Step 4. Playback picture.
   - Manual playback: Click Next or Preview.
   - Auto playback: Slide to auto play, and set interval, system will auto playback local picture.

Figure 6-11
7. Log Search

7.1 Search Client Log

Step 1. In New tab, click Log.
Step 2. Select . System shows Client interface.
Step 3. Set time, type, keyword. Client log includes system log, operation log and alarm log.
Step 4. Click Search. See Figure 7-1.
Note:
After log is successfully searched, you can click Export to export log.

Figure 7-1

7.2 Search Device Log

Step 1. In New tab, click Log.
Step 2. Select .
Step 3. Set time, type, and device. Client log includes system log, config log, storage log and etc.
Step 4. Click Search. See Figure 7-2.
Note:
After log is successfully searched, you can click Export to export log.
Figure 7-2
8. System Config

You can set up base info, preview and playback, event, log, system and language, hot keys, and local path, backup/restore.

Step 1. In homepage, click 🛠️ See Figure 8-1.

Figure 8-1

Step 2. Set parameters, see the following chart.

<table>
<thead>
<tr>
<th>Parameter Type</th>
<th>Parameter</th>

<td></td>
</tr>
</tbody>
</table>
| Preview and Playback            | **Default Stream Type**

Set stream type of preview, including mains stream, sub stream, and self-adaptive stream.

**Instantly Replay Time**

Set at time instant replay of the preview screen.

**Resume last preview**

Check the Resume last preview software record video window status when closing software, and after re-login open the preview screen, the video will be restored as before the software is closed.

**Show IVS Rule**

Show IVS rule in preview and playback video.

**Save Device Tree Selection**

Select Save Device Tree Selection, after record search end, device will keep selected status.

**Device**

**Show device channel number**

Check the Show device channel number, then in Device interface software automatically assigns a unique no. to device, you can modify this no. This no. of device is used for keyboard.

**Auto login device**

Check the Auto login device, restart the software, the software automatically logged added device. Modify this parameter to take effect after the restart the software as needed.

**Auto fill user and key**

Check the Auto fill user and key, enter your username and password, the software automatically login added device according to the username and password. If the login username and password set are the same as user and password of the device, then login is successful, otherwise the login fails.

**Event**

**Loop**

Check the Loop, looping alarm when an event occurs.

**Global wav**

- Check the Global wav, select audio file path, then all alarms shall play the audio file.
- Not check the Global wav, select different types of events and events in the drop-down list, and separately set their corresponding audio file.
<table>
<thead>

</table>

Step 3. Click Save.
9. User

9.1 Role Info

You can add, modify and delete role.

Step 1. In New tab, click User, see Figure 9-1.

Step 2. Click  See Figure 9-2.
Step 3. Set role name and fill in remark.
Step 4. Check menu right of the role, and select tab and set role channel right in Channel right area.

Note:
When user of the corresponding role logs in client, and in New tab it does not show non-allocated menu right, and in corresponding device tree it does not show non-allocated channel right.

Step 5. Click Save.

Note:
Admin has all rights which cannot be modified or deleted. After a role is added, you can modify its right or delete it.

Warning:
When you delete a role, users of this role will also be deleted.

9.2 User

You can add, modify and delete user.
Step 1. In New tab, click User. See Figure 9-3.
Step 2. Select role which you want to add user. See Figure 9-4.
Step 3. Set user parameter, see the following chart.

<table>
<thead>
<tr>
<th>Parameter</th>

### 11.2 Event Alarm Link Config

- **Link Notice**
  
  After set link notice, when event occurs, it will alarm or alarm flash on map.
  
  Step 1. In New tab, click Event CFG.
  
  Step 2. Click device and select event type.
  
  Step 3. Slide to turn on event, click Notify tab.
  
  Step 4. Click Notify tab. See Figure 11-2.
Step 5. According to need, slide to enable alarm sound or map flash.

Step 6. Click Save. Click Copy to, you can link config of this camera to other device.

**Link Video**

After you link video, when corresponding event occurs, it will link corresponding camera preview or record.

Step 1. In New tab, click Event CFG.
Step 2. Click device and select event type.

Step 3. Slide , to enable event, and click Video tab. See Figure 11-3.
Step 4. Select video window, and double click camera you want to link, directly drag it into window.

Note: On , you can set display mode.

Step 5. In camera list to be linked, set camera preset, link record or preview stream type, whether auto open video and enable record when event occurs, linked record or preview duration.

Note: Click , you can delete camera.

Step 6. Click Save.
Click Copy to, you can copy camera link config to other devices.

**Link Alarm Output**

After you config link alarm output, when alarm occurs, it will link corresponding camera alarm output.

Step 1. In New tab, click Event CFG.
Step 2. Click device and select event type.

Step 3. Slide to enable event, and click Alarm Out tab. See Figure 11-4.

Step 4. Select alarm output of link camera and set whether to auto enable and duration.
Step 5. Click Save.

Click Copy to, you can copy camera link config to other devices.
**Arm Time**
Event is armed all-day by default. You can set arm time as needed.

Step 1. In New tab, click Event CFG.
Step 2. Click device and select event type.

Step 3. Slide to enable event and click Arm Time tab. See Figure 11-5.

Step 4. In corresponding day of week drag mouse to delete to add arm time. You also can click of each day of week to set arm time in pop-up box.

Step 5. Click Save.
Click Copy to, you can copy camera arm time config to other devices.
11.3 Event View

You can view the alarm event information, disable event sounds or disable alarm linkage pop video, pause refresh of event information.

In homepage, click or in New tab, select the Event, see Figure 11-6.

- In the Event interface you can view real-time alarm information, view up to 1000 latest messages, please search historical alarm message in log, see Ch 7.
- Select event, you can check Disable sound to disable the alarm sound for event; check Stop link video popup to prohibit pop-up video; check Stop refresh to pause refresh of event.
- Select event, click the Confirm, you can add a description to the event.
- After you handle event or confirm event, you cannot change the status of the event.

Figure 11-6
12. Video Wall

12.1 Video Wall

You can set video wall layout, live preview on wall, scheme and tour plus playback on wall. In New tab, click Video Wall, see Figure 12-1.

</table>
| **PTZ** | There are two ways you can enter PTZ control interface.  
  - Click PTZ area, the system displays the PTZ control interface.  
  - Select video wall with bound device channel, select the right to switch to the head, the system pop-up PTZ control interface.  
  
  See Ch 4.6. |
| 2 | **Video wall** | Set video wall layout and channel video preview on the wall.  
  See Ch 12.2. |
|  | **Scheme tour** | Add scheme, set tour and enable tour.  
  See Ch 12.3. |
| 3 | **Clear video source** | Select screen with bound device channel, right click to select Clear Video Source. |
|  | **Bottom** | Select screen with bound device channel, right click to select Bottom, to set the video wall to the bottom. |
|  | **Set wall mode** | Select screen with bound device channel, right click to select Wall mode > Live or playback on wall, set video wall mode. |
|  | **Open Audio** | Select screen with bound device channel, click 🎧 at the upper right corner of the screen, to turn on audio. |
|  | **Paste** | Click 📋 the window will occupy the physical screen of the window. |
|  | **Maximize** | Click 📀, the window will fill the window in the whole screen. |
|  | **Close** | Click ✗ to close the window. |
| 4 | **Window details** | In Window Details area of the screen you can view the channel information, set tour video channel time span and stream type, preview video channel, adjust order of video channels or delete unwanted video channel. |
| 5 | **Set video wall layout** | Click 📷 to switch video wall display layout. |
| 6 | **Function bar** | - Click 🎥 in the pop-up screen switch box, select screen on or off screen.  
  - Click 🔄 to refresh the screen information.  
  - Choose bound NVR device or device channel video wall in |
group, click to open tour; click to close tour.
- Click to delete the selected window.
- Click to clear the screen.
- Click , you can select multiple windows, then the icon changes to ; click a window.
- Click to display window number and video wall number.

12.2 Config Favorites

You shall place commonly used monitoring or linked channel to a same favorites for easy management and output. In device list, click Favorite tab, see Figure 12-2.

**Add Favorite**

Step 1. In Video Wall interface, right click on favorite list and select Manage Favorite, see Figure 12-3.
Step 2. Click See

Note:
In Figure 12-2, you can click New Favorite, to open Figure 12-4.

Step 3. Enter name, click Save.

Note:
If you want to add more favorites, click Save and Continue to continue adding.

Step 4. Add channel to favorite, see Figure 12-5.
Figure 12-5

1. Select channel on organization tree.
2. Select favorite in favorite list.
3. Click \( \text{\textgreater\textgreater} \) to complete adding.

Step 5. Click \( \times \) of Manage Favorite interface to exit.

Delete Favorite
Step 1. In Video Wall interface, right click in Favorite area, and select Manage Favorite.
   See Figure 12-3.

Step 2. Select favorite, click \( \text{\textgreater\textgreater} \) next to it and delete.

   Note:
   In Figure 12-2, you can click favorite you want to delete, and right click it.

Delete Channel
Step 1. In Video Wall interface, right click in Favorite area, see Figure 12-3.
Step 2. Select favorite to delete.

Step 3. Select channel, click \( \text{\textgreater\textgreater} \) to delete channel.

   Note:
   In Figure 12-2, you can click \( \text{\textgreater\textgreater} \) of channel you want to delete, and select channel, right click delete this item. Confirm your selection.

Change Favorite Name
In Figure 12-2, click favorite name you want to modify, right click Change Favorite Name, enter new name.
Note:
You cannot change name of default favorite.

12.3 Set Video Wall and Output

Condition
Decoder and video wall are connected successfully.

Steps
Step 1. Add decoder, see Ch 3.
Step 2. Set video wall layout.
   a) In video wall interface, click in pop-up box. See Figure 12-6.
Note:
Select multiple screens, click to add splicing screen; select splicing screens, click to cancel splicing screen; click to clear screen config.

![Figure 12-6](image)
b) In basic config interface, set video wall name, select Layout, and click in video wall, to add video wall layout.

c) Click Next. See Figure 12-7.

d) Drag decoder into slot, to bind decoder and screen.

Note:
- Screen display, to show screen no., click Hide number to hide screen number.
- If you want to cancel bound decoder slot, right click corresponding screen and select Cancel Binding.

e) Check Apply Now to immediately use this config; click Finish to complete setup.

Note:
Check Apply Now, then return to video wall interface to enable this config.

Step 3. Preview channel video on wall.

a) In Video Wall interface, click layout you want, and slide , to enable video wall layout.

   See Figure 12-8.

Note:
In pop up box, select video wall layout, click to modify video wall layout, click to delete layout. See Figure 12-8.
Drag device channel into screen, bind channel and screen. Video of corresponding channel is played in the screen, and channel info will be show in Window Details area.

Note:
- Via window split, you can enable window in screen.
- When the device supports roaming, you can drag window randomly among all screens.
- When you drag NVR to the screen, then all channels of NVR are toured on video wall. You can view tour window channel info in Window Details area. You can set tour channel time span and stream type and preview channel video in Operation column, adjust channel order or delete channel.

### 12.4 Scheme Tour on Video Wall

Step 1. Add plan.

a) Select video wall layout and bind channel.

b) Click ![Image](image.png). See Figure 12-9.
c) Set plan name, click Save.
    Repeat step a to c to add more plans.

Step 2. Set scheme tour.

a) Click See Figure 12-10.

![Figure 12-10](image)

b) Set time span and select scheme, click Add Scheme. Repeat this step to add more schemes.
   Note:
   You can adjust scheme order and delete scheme in Operation column.

c) Click Save.

Step 3. Click to enable scheme tour.

Click , to disable scheme tour.

12.5 Playback on Video Wall

Playback device channel record on video wall.

Condition
- Complete video wall config.
- Record exists in device channel.
Steps
Step 1. Select screen with bound device channel, right click Video Wall>Playback on Video Wall. See Figure 12-11.

Step 2. Select record type and stream type, and set time.
Step 3. Click Search.
Step 4. Select record file, click \( \text{播放} \) to playback record.
13. People Count

You can search and export people count result, contrast by time and channel and export people count data.

Condition

- Enabled entrance/exit statistics function.
- Entrance/exit statistical data exists in device.

Steps

Step 1. In New tab, click People Count. See Figure 13-1.

Step 2. Select channel with people count data, and set time and period for search.

Note:

- You can search people count data by date, time, year or month.
- If you select multiple channel, then it will search data of these channels in search period

Step 3. Click Search.

The system shows people count result in this period, see Figure 13-2.

a) Select statistical figure type, set filter to be ex Enter or Exit, and drag to enable contrast.

See Figure 13-3.
b) Set contrast type to Channel and select channel for contrast. This contrasts people count results of different channels within the same period. Set contrast type to Time and select time for contrast. This contrasts people count results of different periods for the same channel. System shows result.
14. Heat Map

You can search object moving accumulated density in device monitor image.

Condition
- Device has enabled heat map statistics.
- Heal map data exist in device.

Steps
Step 1. In New tab, click Heat Map. See Figure 14-1.

Step 2. Select camera with existing heat map data, and set search time and period.

Note:
You can search heat map data by date, period, or day of week.

Step 3. Click Search. System shows object moving accumulated density result of this period monitored by device.
Click Export to export heat map date.
15. **PC-NVR**

After PC-NVR is added, you can manage disk, manage channel, set record plan and view version.

**Condition**
- PC-NVR is installed and running now.
- See Ch 3 to add PV-NVR.

### 15.1 Disk Manager

Step 1. In New tab, click PC-NVR.

Step 2. Select HDD tab, see Figure 15-1.

**Figure 15-1**

Step 3. Select record plan when HDD is full, and set disk space, click Allocate.

System pops up info box, click OK.

**Warning:**
Re-allocate disk space, system will delete all record files on the disk, be careful!

### 15.2 Channel Management
Set channel info to pass PC-NVR record plan.

Step 1. In New tab, click PC-NVR.
Step 2. Select Channel Management tab, see Figure 15-2.

Step 3. In device list select device channel, click

System will add the selected device channel to list on the right.

Note:

- Click to add device channel and shown in thumbnail, click to add device channel and shown in list.
- If you delete unwanted device channel, check box in front of one device channel or check Selected channel to select all channels, click to delete.

Step 4. Click Save.

15.3 Set Record Plan

For the selected channel, set record schedule, motion detect, alarm, MD& alarm, or smart record plan.

Step 1. In New tab, click PC-NVR.
Step 2. Select Record Plan tab. See Figure 15-3.
Step 3. Select channel to set record plan, select stream type, set pre-record time and delay record time.

Step 4. Check record type, and select record time in corresponding day of week bar.  

Note: 
You can click next to each day of week bar, and in pop-up box set record type and period.

Step 5. Click Save.

Note: 
- Click Copy to, and check device channel, you can copy the record plan in this channel to other device channel.
- Click Default to restore default status of device channel record plan.

15.4 Version Info

You can view PC-NVR name, storage path and version.

Step 1. In New tab, click PC-NVR.

Step 2. Select Version tab, see Figure 15-4.
15.5 Modify Port

Step 1. Click at the lower-right corner of PC, select PC-NVR Setting. See Figure 15-5.
15.6 Modify Password

Step 1. Click at the lower-right corner of PC, select Password Setting. See Figure 15-6.

Step 2. Enter original password, and enter new password, confirm new password.
Step 3. Click Save.
16. Video Talk

SmartPSS supports intercom. It can connect to intercom device, for call, live preview, remote unlock, message sending and etc. The following is just an example.

Note:
- Intercom device must be connected to LAN and configured ready.
- After fence station and VTO web interface are configured, you need to add to SmartPSS Client, please refer to Ch 3.5 for steps to add device.

Click in New Function interface, select Intercom.

16.1 VTS Center

Note:
If it is the first time entering intercom interface, you will see a setup interface.

Step 1. Click. See Figure 16-1.

![Figure 16-1](image)

Step 2. Click. See Figure 16-2.

![Figure 16-2](image)

Step 3. Enter VTS address, click OK.

16.2 Monitor
Step 1. Click 📞.

Step 2. On device tree, double click device, or drag device to monitoring window, see Figure 16-3.

Step 3. In Monitor interface, you can unlock, call fence station or VTO.

- Click 📞 in the window, or 📞 at lower bottom, or right click to select 📞 start call.

All of these allow client to one-way call VTO or fence station, so the VTO or fence station can hear call from client.

- Click 🗝 in the window, or 🗝 at lower bottom, or right click to select 🗝 unlock.

Click 📸 🎥 in the window, or right click to select snapshot, start record.

You can snapshot or record the live preview.

In video window, right click menu includes snapshot, record, switch string type, adjust window scale and etc.

- Click 📸 🎥 or right click 📸 🔴 Snapshot 🔴 🎥 🔴 Start Record 🔴

- More function

In video window, you can snapshot, record, change steam and etc. Refer to Ch 4.

16.3 Intercom
Step 1. Click

Step 2. Click device on device tree, see Figure 16-4.

Note:

According to name of fence station, or building no., unit no. on VTO, it will auto generate contact list.

By click next to Contact, you can quickly search contact. It supports precise search of building, unit, room.

Figure 16-4

Step 3. In Intercom interface, you can call VTO, VTH and etc.

- If client needs to call VTO in a certain unit.

    Step 1. Right click on VTO, or on dial number.

    System pops up a box, see Figure 4-43.
Step 2. Click  
Step 3. System pops up dialogue box, click OK. You can remotely unlock VTO.

Step 4. Click  , to stop existing call. Call window will not close.

- If client needs to call a VTH in a specific room and unit.

Step 1. Click  on VTH name card or dial number on . Please note client and VTH can talk to each other as a bidirectional talk. System pops up a box, see Figure 16-6 .

Figure 16-5

Figure 16-6
Step 2. When VTH picks up, client can talk with VTH.

- If VTH does not answer over 60s, then client pops up a box to ask if you want to dial again.
  
  You can click to re-dial.

- If the VTH is busy or hang up call, client will ask you to try again later.

![Image of VTH call interface](image1)

Figure 16-7

- If VTO is calling client.
  
  Client pops up VTO call box, see Figure 16-8.

![Image of VTO call interface](image2)

Figure 16-8
You can click ✆ to answer VTO call, and start a bidirectional talk.

You can click ⬇️ to unlock.

- If VTH is calling client.
  Client pops up VTH call box, see Figure 16-9.

![Figure 16-9](image)

You can click ✆ to talk with VTH.

If there is missed call, in talk interface, in the lower-right, missed calls are shown here. See Figure 16-10.

![Figure 16-10](image)

**16.4 Announcement**

Step 1. Click 📢. See Figure 16-11.
Step 2. On device tree, double click one or more VTHs.
Step 3. Enter message name and content, click Send. You can view announcement info on VTH.
   Note:
   During sending, Send button is grey. You shall wait until it resumes before you can send message.

16.5 Info Search

You can search alarm record, unlock record and call record. This chapter takes alarm record as an example.

Step 1. Click select alarm record. See Figure 16-12.
Step 2. Set criteria, click Search. You can export result of search.

**16.6 Issue Card**

Step 1. Click , see Figure 16-13.
Step 2. Create organization tree, see Figure 16-14.
1. In blank area of organization tree, right click and select Add Organization. See Figure 16-15.

Note:
You also can click Sync Organization Tree to organization created when you add the device will be shown here.

![Add Organization](image1)

Figure 16-15

2. Enter name.
3. Click the organization you just add, and right click and select Add Organization.
4. Enter name of unit, click Save.
5. Click node of device to link, right click to link device. See Figure 16-16.

![Link Device](image2)

Figure 16-16
6. In device tree select link device, click OK.

Step 3. Issue card.
- Progressively issue card.
  
  Step 1. In device list, click Issue Card, see Figure 16-17.

![Issue Card Interface](image)

**Figure 16-17**

Step 2. Set parameter, click Issue Card, see Chart 16-1.

</tbody>
</table>

**Chart 16-1**

- Batch Issue Card

Please prepare user info list before you batch issue card, and import user info list to batch. To get user info, you can export user info. You also can back up user info.

Step 1. Click Import.
Step 2. Select user list, click Open.
17. Access

SmartPSS integrates access control device with effective management and configure of device. It achieves modularization of access business and integrates access with video link and e-map. Note:

- Access controller must be added into SmartPSS client, please refer to device adding steps in Ch 3.
- Access controllers are set on SmartPSS, including network, user management, time config and update. See Ch 10.

Click in New Function interface, select Access.

17.1 Console

Step 1. In Access interface, you can click See Figure 17-1.
<table>
<thead>
<tr>

| Basic Info      | User ID 【mandatory】  
|                 | Name 【mandatory】  
|                 | Department 【Auto】  
|                 | Card no.: input by card reader and manually  
|                 | Card type: general card, VIP card, guest card, blacklist card, patrol card, and duress card  
|                 | Unlock password: only used for unlock via password  
|                 | Card password: used for card+password unlock  
|                 | Number of use: only for guest card  
|                 | Validity: card validity, 10 years by default  
|                 | Picture: user photo, max 120K  
|                 | Note:  
|                 | Card no. and user ID cannot be repeated.  |
| Fingerprint Info| Collect fingerprint via fingerprint device and reader  
|                 | Each user can have up to 3 fingerprints  
|                 | Support input of fingerprint name  |
| Details         | Gender, title, education and etc.  |

17.2.2.2 Batch Add

In User Management interface, you can click button to batch issue card, see Figure 17-17.
### Parameter | Note
---|---
Batch Issue Card by User | Manually check user to want to issue card to 【auto filter out users already have card】
| Click Batch
| User select card issuing device: support card issuer and card reader of controller.
| Click read card no, and device starts to read.
| Place card on device, link user to card no. one by one.
| Click save to complete card issuing.
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Note</th>
</tr>
</thead>
</table>
| Batch Issue Card by User ID/Name | User click to batch issue card  
Enable [Work ID](#)  
User can enter user ID or name to fuzzy search.  
Click to get user and auto complete adding user or directly click search to get first 200 unauthorized users.  
Click read card no., so device starts to read card no.  
Place card on device one by one to link card to work ID by sequence.  
Click save to complete. |

Chart 17-8

In User Management, you can click ![edit button](#) button to edit user, see Figure 17-18.

![Figure 17-18](#)

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Validity</td>
<td>Check user you want to edit. &lt;br&gt;Click 🖊. &lt;br&gt;Check valid time. &lt;br&gt;Set time. &lt;br&gt;Modified valid time will be sent to device. &lt;br&gt;Complete.</td>
</tr>
</tbody>
</table>

#### 17.2.2.2.3 Delete

In User Management interface, click 🗑️ button to delete user. Check user you want to delete, click Delete. Confirm that all information and rights of the user you are doing to delete will be deleted from the device.

#### 17.2.2.2.4 Import/Export

**Warning:**

If imported data (User ID/card no.) already exists, it will not import the information.

You can click either of 📄 or 📄 to import/export user info.

Import/export info includes: user ID, name, card no., card type, department, fingerprint name, fingerprint name.

**Note:**

During data importing, it auto generates department.

#### 17.2.2.2.5 More Operations

In User Management interface, you can click 🖊️, 🗑️, 🗑️, 🗑️

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>🖊️</td>
<td>Modify user info.</td>
</tr>
<tr>
<td>🗑️</td>
<td>Delete user info.</td>
</tr>
<tr>
<td>🗑️</td>
<td>Clear user card no. and delete card info in device.</td>
</tr>
<tr>
<td>🗑️</td>
<td>Freeze card no. in device. You can click unfreeze if you want to restore frozen card.</td>
</tr>
</tbody>
</table>

**Chart 17-9**
In User Management interface, you can click ![search icon] to search keyword of user.
Note:
User ID and name support fuzzy search.
Card no. supports accurate search.

### 17.3 Permission Management

In Access interface, you can click ![permission icon] on the left to enter Permission Management which allows management of right about user issuing card.

#### Door Group Right

In User Management interface, you can click ![door group icon] and set a specific period of time, a specific door or door group can be unlocked via verification, see Figure 17-19.

![Door Group Right](image)

**Figure 17-19**

<table>

</tbody>
</table>

Chart 17-10

In Door Group Right interface, click Add, see Figure 17-20.

![Add Door Group](image)

**Figure 17-20**

- **Step 1.** Enter name of door group, which cannot repeat existing door group name.
- **Step 2.** Select access period.
- **Step 3.** Check door, click Save.

Click **button** to re-edit door group info.

**Warning:**

**Door group name cannot be repeated!**

In Door Group Right interface, click **+** to add use right, see Figure 17-21.
<table>
<thead>
<tr>
<th>No.</th>
<th>Parameter</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>User List</td>
<td>Existing user info with door group right</td>
</tr>
<tr>
<td>2</td>
<td>Search List</td>
<td>Info of user without door group right</td>
</tr>
</tbody>
</table>

**Note:**

Step 1. In search list dropdown list, select department of user you want to add or directly enter user ID or name.

Step 2. In search list check searched user and add to list.

Step 3. You can delete user who already has right.

Step 4. Click Save, to complete the selected user into all door groups.
In search list filter out user who do not have card no. info.

In Door Group Right interface, you can click button to delete all information and right of the door group in the system.

**Warning:**
During right issuing process, please sure client and device are well connected.

### User Right

In User Management interface, you can click in User Right interface to add specific user into access right list, or delete specific user from list.

- **Step 1.** Check or cancel checked door group.
- **Step 2.** Click OK as to confirm cancellation or adding of personal user right.

### First Card Unlock

In Permission Management interface, click First Card Unlock, you Add button to set within specific period, only when user with first card unlock right pass verification for the first time, door status will be normal or NO and will be close after this period ends, see Figure 17-22.
Step 1. Select to enable first card right door.
Step 2. Select period.
Step 3. In search list, select user with first card right.
Step 4. Check user.
Step 5. Click Save.

Warning:
For user who is auto filtered out in search list due to lack of right of the door, he/she must be given right of this door by first card right holder.
You can click Multi-door Lock to set that a specific door can be unlocked only when specific users of a group all pass verification in a specific order.

Step 1. Click  select Multi-door Lock.
Step 2. Click User Group Manager, see Figure 17-23.

![User Group Manager](image)

Figure 17-23

Step 3. In User Group Management interface, click  see Figure 17-24.
Step 4. Select group member.
Step 5. Save to complete adding.
Step 7. Select door you want to enable multi-door unlock.
Step 8. In Multi-door unlock setup interface, check group.
Step 9. Fill in valid number of user for each group.
Step 10. Select unlock method for each group. (card, password and fingerprint).
Step 11. Click ▲ ▼ to adjust sequence of unlock.
Step 12. Click Save.

Note:
- A group can contain up to 64 users.
A door with enabled multi-card unlock supports up to 4 groups to verify at the same time, total number of user cannot exceed 64; total valid user cannot exceed 5.

**Anti-pass Back**
In Permission Management interface, click Anti-pass Back to set verification user. A user verifies at door A must verify at door A again when exits since card record must match one to one. If a user does not verify when enters, he/she will not pass verification when exits.

Step 1. Click select Anti-pass Back.
Step 2. You can click Add in Anti-pass Back interface. See Figure 17-25.

![Anti-pass Back Configuration](image)

**Figure 17-25**

Step 3. Select access controller to use anti-pass back.
Step 4. Select anti-pass back rule according to access controller.
Step 5. Confirm.

**Note:**
Rule of anti-pass back:
Unit/single door controller: door reader anti-pass back.
Dual door controller/four door controller: reader 1 and 2 anti-pass back, reader 3 and 4 anti-pass back, reader 1/3 and 2/4 anti-pass back, reader 1 and 2/3/4 anti-pass back.
Four door controller: reader 1 and 2 anti-pass back, reader 3 and reader 4 anti-pass back, reader 1/3 and 2/4 anti-pass back, reader 1 and 2/3 anti-pass back, reader 1 and 2/3/4 anti-pass back.

**Inter-door Lock**

In Permission Management interface, click Inter-door Lock, to set inter-lock between two doors on one access controller. When one door is unlocked, other doors will be locked. If you want to unlock one door (under normal status), all of the others shall be locked, otherwise you cannot unlock this door.

Step 1. Click select Inter-door Lock.
Step 2. You can click Add in Inter-door Lock interface. See Figure 17-26.

![Figure 17-26](image)

Step 3. Select access controller to inter-lock.
Step 4. Select rule of inter-lock.
Step 5. Confirm.

**Note:**
Role of inter-lock:
Single door controller has no inter-lock.
Dual door controller: 1-2 door inter-lock.
Four door controller: 1-2 door inter-lock, 3-4 door inter-lock, 1-2-3 door inter-lock, 1-2-3-4 door inter-lock.

**Remote Verification**

In Permission Management interface, you can click Remote Verification to ask the client to let user who passes verification enter within certain period, and admin will judge whether to unlock or not.

Step 1. Click select Remote Verification.
Step 2. You can click Add in Remote Verification interface. See Figure 17-27.

![Remote Check Add](image)

Figure 17-27

Step 3. Select door and time to enable remote verification.
Step 4. Save.

**Period Setup**
In Permission Management interface, click Period Setup to set specific reader to be valid with specific period and not valid on other periods, as well as set that user can only access a specific door within a specific period. Period is used for NO period, holiday period, first card period, remote verification period, door group right period.

Step 1. Click select Period Setup.
Step 2. Click Add, see Figure 17-28.

![Period Setup](image)

Figure 17-28
Step 3. Enter period name.
Step 4. Select daily period for Monday to Sunday.
Note: A device supports to 128 periods setup with daily limit of 4 periods.

**Holiday Setup**
In Permission Setup interface, click Holiday Setup to set different access period from general period.

Step 1. Click select Holiday Setup.
Step 2. Click Add, see Figure 17-29.

![Figure 17-29](image)

Step 3. Enter name.
Step 4. Select range.
Note: Within holiday period, holiday has priority in execution. Holiday period is for access only.

**17.4 Event Configuration**
In Access interface, you can click Event Configuration. You can set that when a input point inside access system triggers a specific event, client will have video link(live preview/record), link event includes: alarm, abnormal, normal event, link event pop-up plus display in log.
Please refer to the following for configuration of event scheme.
Step 1. Click [Image]. See Figure 17-30.

Figure 17-30

Step 2. Select device channel.
Step 3. Select alarm event.

<table>
<thead>
<tr>

<td>Triggered when a user passes device verification and is asking for client verification for door under remote verification.</td>
</tr>
</tbody>
</table>

**Chart 17-12**

Step 4. Set alarm link, see Ch 11.2.
Step 5. Click Save.

**17.5 Log**

In Access interface, you can click Log. You can search for log according to criteria.

Step 1. Click , see Figure 17-31.

Step 2. Set search criteria. Search can cross up to 2 days.
Step 3. Click Search, see Figure 17-32.
You can reboot search criteria, export search result and view record.

- **Restore**: restore criteria.
- **Backup**: export searched log.
- **Extract**: extract log info of all devices or selected devices.
- **View Record**: view record.
